A protein or a fragment encoded by HNG gene can be used as a starting point for preparing suitable antibodies for diagnosing cells involved in renal diseases disorders. The products and method can be used to treat or diagnose renal diseases and disorders selected from vesical-ureteral reflux, uni or bilateral pelvi-ureteral junction obstruction, multicystic redysplasia (MRD), renal agenesis, renal aplasia, hydronephrosis, von Mayer-Rokitansky-Kuester disorder and bifid ureter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        to design suitable compounds or techniques for the treatment of renal diseases or disorders, or nucleotide probes for diagnosing cells involved in renal diseases or disorders. Constructed at the Institute for Genomic Research (TIGR),
Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Rypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (10-DEC-2000) Trypanosoma brucei genome sequencing project, Sanger Centre, The Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 1SA, E-mail: barrell@sanger.ac.uk and

Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid Rl. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC oligonuclectide probes (II) will hybridise with little mismatch, where CC (I) have melting temperatures within a narrow range. The method is useful CC for detecting infectious diseases caused by bacterial infectious agents CC e.g. Salmonella, Listeria monocytogenes and Haemophilus influenza, fungal CC infectious agents e.g. Cryptococcus necformans, Candida albicans and CC Aspargillus fundaturus, viruses e.g. T-cell lymphocytotrophis cirus, CC Epstein-Barr virus and polio virus, and parasitic infectious agents CC medinesis. The method is also useful for detecting genetic diseases such CC as 21 hydroxylase deficiency, Turner Syndrome and obeslty defects. CC electing cancer involving oncogenes, tumour suppressor genes, or genes cinvolved in DNA amplification, replication, recombination or repair, the CC cancer is specifically associated with a gene selected from BRCAl gene, buman papillomavirus types 16 and 18 and liver cancers. The CC method is also used for environmental monitoring, forensics and the food CC and feed industry, detecting comprises scanning (using e.g. a scanning electron microscope and infrared microscope) the support at the CC particular sites and infrared microscope) the support at the compressor or absence of the target nucleotide sequences. ABIS2074 to of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a PCR primer used for site directed mutagenesis CC (to excharge Mycoplamsa specific UGAtrp codons to universal UGGtrp CC codons) of lipoprotein LppQ gene from Mycoplassa mycoides subsp. CC mycoides SC (small colony type). LppQ is useful in a diagnostic method for the direct or indirect detection of M. mycoides subsp. mycoides SC, CC where the diagnostic method is an immunological method such as indirect detection of M. mycoides subsp. mycoides SC, CC where the diagnostic method is an immunological method such as casely. LppQ DNA and protein are useful for the preparation of a vaccine CC assay). LppQ DNA and protein are useful for the preparation of a vaccine capainst infection by M. mycoides subsp. mycoides SC. LppQ DNA is useful for the preparation of live, attenuated or inactivated cells of CC m. mycoides subsp. mycoides SC to be used as marker vaccine, where the CC cells lack the ability to synthesise the LppQ lipoprotein. LppQ DNA is colles subsp. mycoides SC, where the LppQ lipoprotein method for CC m. mycoides subsp. mycoides SC, where the detection method for CC musicologies directed to it in a body fluid such as serum or bronchial CC fluid from an animal. LppQ protein are also useful as a specific antigen CC for sero-detection of contagious bovine pleuropneumonia (CBPP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel protein LppQ of Mycoplasma mycoides subsp. mycoides SC, or its parts useful for detection of Mycoplasma and for preparation of vaccine for treating infection caused by Mycoplasma -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was but end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt end-repaired and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWn92 (gil4732114|gb)AF129072.l), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          USA

to cleave RNA of CD20 in the presence of a divalent cation that is preferably Mg^2+. Furthermore, it may be contacted with a cell to reduce CD20 activity of the cell and treat a patient having a condition associated with the level of CD20. The treatment may further comprise the used of one or more therapies. In particular, the CD20 targetting nucleic acid may be used to treat lymphoma, low-grade or follicular non-Hodgkin's lymphoma (NHL), bulky low-grade or follicular NHL, lymphocytic leukaemia, HIV (human immunocytoma (HVC), small B-cell lymphore, cell lymphoma (MCL), immunocytoma (HVC), and in sesciated NHL, mantle-cell lymphoma (MCL), immunocytoma (HVC), and in sesciated NHL, mantle-cell lymphocytom thrombocytopaenia, and inflammatory arthropathy. The NOGO-targetting nucleic acid is used to cleave RNA of the NOGO gene in the presence of a divalent cation that is preferably Mg^2+. Furthermore, the nucleic acid may be contacted with a cell to reduce NOGO activity of the cell and treat a patient having a condition associated with the level of NOGO. The treatment may further comprise the use of one or more therapies.

The particular, the NOGO-targetting nucleic acid may be used to treat central nervous system (CNS) injury and cerebrovascular accident (CVA, attrobe) altherer's disease demonstrate multithe sclear accident (CVA). The invention relates to a nucleic acid molecule which down regulates expression of a CD20 gene and a nucleic acid molecule which down regulates expression of a neurite growth inhibitor gene (NGGO). The nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a DNAzyme) an Inozyme (an endolytic nucleic acid cleaving a an RNA molecule possessing an NCH motif), a G-cleaver (cleaving RNA with a NYN motif) pr an amberzyme (cleaving RNA with an NCN triplet), a zinzyme (cleaving RNA with an NCN triplet) a zinzyme (cleaving RNA with an NCN triplet) a zinzyme (cleaving RNA with an NCN triplet). stroke), Alzheimer's disease, de chemotherapy-induced neuropathy, Parkinson's disease, ataxia, Hun dementia, multiple sclerosis (MS) hy, amyotrophic lateral sclerosis al sclerosis (ALS) Creutzfeldt-Jakob

Genomic DNA isolated from a cloned population of Trypanosoma brucei (TREU927/4 GUTAt 10.1) was mechanically sheared to give a tight size distribution (4 kb). The v + i method used for the library construction is described in detail in Smith, H. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barrell, Oxford University Press, 1999).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        quality sequence stop: 20.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

Mlo fungal resistance protein. The primers are used to isolate further Mlo gene family members. The Mlo protein confers resistance to fungal pathogens by stimulating the formation of large cell wall appositions, designated papillae, at the contact site with the fungal pathogen. These papillae mainly contain callose, but also contain carbohydrate, phenols and proteins and are used to prevent penetration of the fungal hyphae into the plant. The new Mlo sequences are used to generate transgenic plants resistant to fungal pathogens,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Consensus; resistance; fungus; pathogen; wheat; cell wall; apposition; papilla; contact site; callose; carbohydrate; phenol; transgenic plant; Mlo; Erysiphe graminis; powdery mildew; PCR; primer; amplification; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to specific fungi or bacteria detected and continued in a sample by extracting and recovering DNA from the organism continued in the sample and hybridising and amplifying the DNA sequence using continued to the species/group of species but common to all continued to the species/group of species. The method especially employs continued the species/group of species. The method especially employs continued the specifical from 225 fungal and bacterial primer and probe continued to specified bacterial. The method enables detection and continued to specification of specific fungi/fungal continued to specification of specification of specific fungi or bacterial species, useful medically for disgnosis and treatment of fungi or bacterial associated with health problems such as infections, construction associated with health problems such as infections, construction to detect and/or quantify microorganisms in the environment e.g. to establish the risk of adverse health effects (e.g. pulmonary for the contraction of specific fungional specific fungio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                               This oligonucleotide comprises forward PCR primer ROBR 27. Its sequence corresponds to bases 796-816 of a rat ob receptor (OB-R) CDNA sequence (see AAT64961). It was used with rat OB-R reverse primer ROBR 28 (see AAT64986) to amplify 1.8 kb fragments of rat genomic DNA from lean and fa/fa (fatty) Zucker rats. Subsequent digestion of the PCR product from a homozygous lean rat using restriction endonuclease MspI yielded 2 fragments of 11(0 bp and 700 bp. MspI digestion of the PCR product from a fa/fa rat yielded fragments of 950, 130 bp and 700 bp. The fa mutant OB-R gene fragments of 950, contains an A to C transversion at bp 880 that creates an extra MspI site. This allows genotype analysis of lean and

                                                                                                                                            CC like polypeptides designated as agy-96614-al and agy-969406-al and concleic acid molecules encoding such polypeptides. Polypeptides of the invention are useful for treating, preventing or ameliorating can disease, condition, or disorder which includes cancer such as a carteriosclerosis, vascular restenosis; pathology from allergens such as allergies, asthma, dermatitis, pathology from allergens such as allergies, asthma, dermatitis, dysfunction of immune system such as rheumatoid arthritis, autoimmune disease, multiple sclerosis, cancer also useful for identifying antagonists and as immunogens, for are also useful for identifying antagonists and as immunogens, for calsing antibodies which may also be used to prevent, treat or calsones a number of diseases and disorders. Polynuclocides of the invention are used to map the location of CD20/IgE-receptor like gene and related genes on chromosomes and as hybridisation probes. They are also useful in gene therapy. The present sequence is reverse transcription PCR (RT-PCR) primer used to examine the expression of human agp-96614-al sequence.

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified p7773 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. "
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /clone="IMAGE:1947009"

                                                                                                                                                                                                                                                                     AAX91991-X97517 represent PCR primers used to amplify open reading frames and other nucleic acid sequences from the genome of Chlamydia pneumoniae (see AAX91990). C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent oitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAX3584-AAX35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coll XI10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Conservative

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 was blunt end-repaired with T4 DNA polymerase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwb42 (gil4732114 gb | AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli X110-Gold (Stratagene) cells and selected for ampicillin resistance."

The present invention relates to a new polypeptide of human uridylate kinase 12, its fragment, analogue or derivative. The polypeptide of the invention and its encoding polynucleotide are applicable in diagnosis and treatment of malignant neoplasm, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases, various inflammations, sterility, pregnancy pathology, embryonic development disorders, growth and development disorders and hereditary diseases. The present nucleic acid sequence represents reverse transcriptase (RT)-PCE primer 2 that was used in the methods of the invention to isolate the coding sequence of the human kinase uridylate 12 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human uridylate kinase 12 and encoded polynucleotide, applicable diagnosis and treatment of developmental disorders, malignant tun haemopathy, HIV infection, immunological diseases and various

ARESULT 34
ARISHE ARISH 
                 CC (I) have melting temperatures within a narrow range. The method is useful CC e.g. Salmonella, historia monocytogenes and Haemophilus influenza, fungal CC e.g. Salmonella, Listoria monocytogenes and Haemophilus influenza, fungal CC infectious agents e.g. Cryptococcus neoformans, Candida albicans and CC Aspergillus fumigautus, viruses e.g. Ticell lymphocytotrophis cirus, C Epstein-Barr virus and polio virus, and parasitic infectious agents CC selected from Onchoverva volvulus, Entamoeba histolytica and Dracunculus CC selected from Onchoverva volvulus, Entamoeba histolytica and Dracunculus CC selected from Onchoverva volvulus, Entamoeba histolytica and Dracunculus CC at hydroxylase deficiency, Turner Syndrome and obesity defects. CC Detecting cancer involving oncogenes, tumour suppressor genes, or genes (or genes involved in DNA amplification, replication, recombination or repair, the CC cancer is specifically associated with a gene selected from BRCA1 gene, CC p53 gene, human papillomavirus types 16 and 18 and liver cancers. The CC method is also used for environmental monitoring, forensics and the food and feed industry, detecting comprises scanning (using e.g. a scanning CC electron microscope and infrared microscope) the support at the comparise sets occurred and correlating (using a computer) identified ligation to a gressence or absence of the target nucleotide sequences. ABI82074 to CC Of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method (M1) for designing capture oligonucleotide probes (I) for use on a support to which complementary oligonucleotide probes (II) will hybridise with little mismatch, where (I) have melting temperatures within a narrow reach minimatch, where
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; K-ras; PCR primer; probe; capture probe; mutation detection; ligase detection reaction; LDR; p53; BRCA1; BRCA2; infectious disease; infection; 21 hydroxylase deficiency; Turner Syndrome; obesity; cancer; oncogene; tumour suppressor; human papillomavirus; forensic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Designing capture oligonucleotide probes complementary oligonucleotides hybridize

This can be used to identify specific modulators of HERG, which are potentially useful as antiarrhythmic, antifibrillatory and antiinflammatory agents. The present sequence is a mutagenic primer used to disrupt the yeast TRK1 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Genetically modified yeast lacking endogenous potassium transport activity, useful for identifying e.g. antiarrhythmic agents, includes a functional human potassium channel -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S. cerevisiae; yeast; potassium translocation system; TRK1; TRK2; TOK1; human erg potassium ion channel; HERG; antiarrhythmic; antiinflammatory; antifibrillatory; HERG modulator; mutagenic primer; ss.
